

CRONOS BOND

Description:

A double-needle flatbed machine, with one or two needles, designed for medium-weight materials such as upholstery, leather goods, and technical textiles.

The bottom feed, needle feed, and alternating presser feet, combined with the increased presser foot lift, result in smooth material handling, even when sewing over cross seams.

The large vertical hook, with a higher bobbin capacity, is suitable for working with thicker sewing threads.

Its standard safety clutch prevents misalignment and damage caused by possible thread jams.

By equipping the machine with different sewing sets and attachments, it can be easily adapted to any type of work.

Features:

- Strong feeding power through the top feed with alternating presser feet.
- Low-consumption servo motor with needle positioner.
- Uniform material feeding without shifting of components.
- Reinforced hook on a vertical axis.
- Effective hook protection through an integrated anti-lock clutch (M).
- Robust and durable, designed for long life.
- The large top feed stroke (7 mm) allows for easy sewing of thick materials and smooth handling of uneven surfaces and cross seams.
- Easy maintenance.
- Easy placement and removal of pieces, even large ones, thanks to the 14 mm clearance for material passage.

Advantages:

Excellent stitch quality and smooth material feeding thanks to the triple feed system with alternating presser feet.

Extended sewing cycle due to the vertical hook with a large bobbin capacity.

The greater top feed stroke of up to 5 mm allows it to easily handle cross seams and thicker materials.
