

ROBOCOP electric

Physical Description:

Fully automatic machine with a metal body, mounted on a table and equipped with supply channels, electric motors, and electronic control.

Dimensions	
Height	150cm
Width	90cm
Depth	70cm
Weight	138kg

Technical Specifications	
Engine Power	1 HP 220-380 V 3,3 A / 0,75KW
Efficiency	3200 Hits per Hour

Usage Features:

- Do not remove any parts from the machine that protect the worker from possible accidents, and do not remove any labels or signs indicating electrical parts and hazards.
- Before connecting the machine to the power supply, make sure it is in its final position.
- The machine must be connected to 220V.

Function:

The machine is designed for the automatic placement of eyelets and washers. Channels and nozzles can be changed to adapt the machine to different sizes and materials of eyelets, making the necessary adjustments.

Maintenance:

Cleaning, handling, and/or changing parts of the machine must ALWAYS be done with the machine disconnected from the power supply. For optimal machine performance, it is recommended to keep certain parts clean and lubricated. Cleaning should always be done with the machine disconnected.
