LacyTip HD

If you have to lift rubber seals, weatherstrips or trims to tuck your vinyl underneath, sometimes you need a heavy duty steel stick to get the torque on a certain spot.

A lot of professional installers around the globe love our popular LacyTips, but they wanted to have them in a more heavy-duty version with customized tips. Here we go - our LacyTip HD...and we take "HeavyDuty" really serious on that :)

They come in two different sizes of the ball tip and two different versions of the shovel tip. You better have 'em both :)

The Teflon Version glides perfect under rough and older rubber seals.

CeraCut

Since we already had positive experiences with ceramic blades in our deburring tools series for many years, we also had a try in ceramic break-off blades and wanted to know: "Are they appropriate for signmakers?" YES - absolutely!

- harder than steel blades
- extremely sharp
- 10 times more durable

Lucky FlipperPen Duo

Our customers and friends Lukas Heinzmann and Christian Benner developed this ingenious stick in order to apply foils perfectly around door edges and edges in general.

The robust low-friction plastic of the glide head allows the pen to glide perfectly over the vinyl at a 30-degree angle. Simply brilliant - thanks to the two ambitious tinkers!

WrapBar Pro

In order to „preload“ a CarWrap film on any vehicle part you need a free hand to generate tension and to change the pull direction to prevent waves or folds on the graphic. However, a too firm grip can cause the most wrinkles and waves.

To help to prevent this, we have been offering our WrapBar series for years and it has now been upgraded based on your suggestions. Many of you have expressed that a hand sized WrapBar offers the best power and likewise, a central handle is essential to counteract wrinkles.

We have heard your demands and we have answered! Introducing our new WrapBar PRO in lengths of 15cm, 30cm, 40cm, 50cm and 150cm (incl. Magnet holder) and as a replacement for the old lengths now also in 100cm and 150cm. The 150er version is different than the shorter sizes as it has three handles instead of just one. So you can either continue to hold the preload alone or even the wider one or use them both!

Problem:

Wrinkle in the film to be held and hand prints on the edges.

Solution:

Smoother surface thanks to lighter preload by the WrapBarPRO.

Six fixed lengths available - more on request

TIP: We make these tools in our factory so custom sizes are always available! :)

Vinyl sheets up to 160cm can be preloaded effortlessly.

WrapBend-it

(DbS Andreas Tank) – Never ceases to amaze us with his simple yet inventive ideas! It's no wonder he is a true car wrap professional in Germany and of course we love that he is a proud customer of Yellotools. Andreas commissioned us to produce a flexible, yet stable wire, with which he could copy the contours and outer dimensions of shapes and transfer them to his film in advance. Even the top pros sometimes guess wrong and make a cut too short to leave an annoying part of your project uncovered but with the use of our WrapBend-it there's no more guessing!

SensorCut Flexi

We feel your pain. We know that „free-hand cutting“ the park sensors on cars can be madness. The steel gauges come in all sizes!

With the inspirations of so many professional CarWrappers we now offer this genius stainless steel gauge from 13mm - 25mm to place on the vehicle to measure and calibrate a cutting template with an easy to use then yet stable shape!

This product is also **Made by Yellotools** so we can customize it to your wishes.

Tip: We recommend cutting with our popular „Hand Plotter“ SwivelKnife!

SensorCut Orbit

Jürgen Eidt - passionate member of GEWA and one of the best application trainers we know found our EasyOrbit as a great tool for fast „on-site cutting“ of parksensor patches.

Unfortunately, at the time, our tool only had the ability to cut circles with 30mm diameter or larger.

We have changed this for Jürgen and can now offer this wrap version, **The SensorCut Orbit!** with a minimum diameter of 5mm without a center hole.

Stepless from 5 mm to 150 mm - ingenious for PDC patches

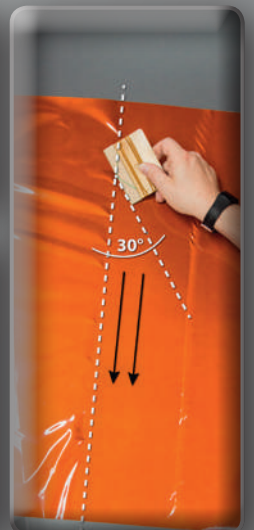

30 Wrap Guide

We had an inhouse seminar with the exceptional **Robin Boes** and he made it clear to us what problems „at the beginning“ can appear. Robin gave us the perfect tip which was to guide your squeegee in a „30-degree angle“! **But where in the world is this 30 degree line and how can I discipline myself to find this line?**

Robin marked a 30° line on our squeegee to help us out! How simple was that? Instantly we noticed the results as we tried wrapping and have a guess - wrinkle-free! So we developed this simple but ingenious **30WrapGuide**. With its help (and the appropriate water resistant special pen **EasyDot Window Dry**) you can quickly and simply create a „cheat sheet“ on your squeegee. This is how you can apply films without wrinkles.

A real MUST in every starter's kit

Gecko patch

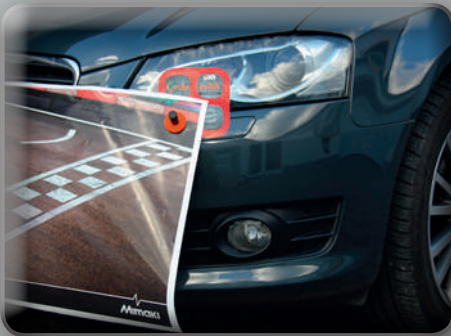

Alessandro D'Angelo, our dear friend from **APA in Italy** liked our Mag-TapeRuler so much that he asked if it were possible to create single patches for the car wrap industry as he said that the hood wrapping of a BMW X5 is a nightmare and he'd love to be able to use our magnets.

This idea at the time seemed easy enough, but we had no idea how receptive this new tool would be around the world. So we developed four different prototype patches using **our patented X-treme Mat** and sent them to our beta-testers in Japan, Germany, Australia and the USA!

The result was overwhelming! Would you like to work with non-magnetic (smooth) surfaces such as windows, fiberglass, GRP superstructures, aluminum hoods or plastic doors and use our magnets as usual? Just simple use our **GeckoWrapPatches** and make any smooth surface magnetic!

And while we put up with being imitated by those who lack innovation and creativity at times, we'll be putting our foot down on this one. (Patent pending)

Whether it's on plastic bumpers...

GRP superstructures, painted aluminum boxes...

car windows, fiberglass hoods...

plastic hard shells, lightweight constructions...

shop windows, glass showcases...

or even tarp – make everything MAGNETIC!

Gecko clean

Fast and easy cleaning for all Yellotools X-treme Mat products!

Suitable for these products:

- GeckoPatch S | M | L | Flexi
- IvoCut X-treme
- GlasPad X-treme
- X-treme Mat
- MagicStick X-treme
- MagTape Ruler
- GrafterPatches
- EasyNooks

WrapStraight Cut

The CarWrap scene in Japan does not bloom less than in other countries ...!

Also from here we get genius suggestions from „masters of her Compartment“.)

For example, that of a „cutting aid spatula“ With Teflon strips in the three material thicknesses

1.0mm, 1.5mm and 2.0mm. at vehicle disc edges in the desired overlap.

Cleanly and safely cut and put under the seal, a really clean thing :)

Available in three different thicknesses!

WrapSlipCut Clipper / Mini

The „clipper“ version of the WrapSlipCut Mini allows you better handling and improved grip in the palm of your hand.

As an option we also offer the WrapSlipCut Mini without the handle.

It's your choice! :)

Perfect 2-in-1 version: Distance cuts inside and outside!

WrapSlipCut MagicMaster

In the world of advertising technology or CarWrapping it really is so much about „personal preference“ ...!

Robin Boes - (CarWrap Legend and World-renowned foil coach) likes cutting the way that the WrapStraight Cuts allows and since he was happy with our Teflon-refined hard squeegee, we designed one with CNC-cut parallel slots. We also provided distance cuts for vehicle edges and window frames.

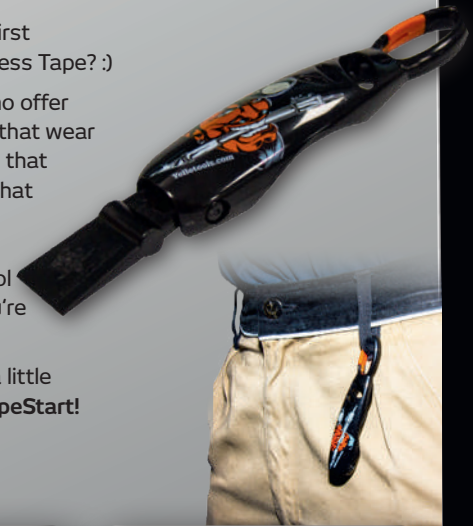

YelloTape Start

We love what you hate ... like the „opening“ of the first centimeters of your Knifeless Tape? :)

There are competitors who offer over-priced startersticks that wear out super fast and others that are made with materials that can scratch the surface! One thing is clear: with a little exercise the best tool for the job is one that you're born with – your finger!

For those who still want a little help, we offer the YelloTapeStart!

EasyDot

The admired marker for deep holes in thicker sign materials and many more.

GrafterPatches

They protect the plexiglas from scratches while mounting.

EasyUp HD

Carry large panels safely and easily. Reduced risk of injury.

SignSetter ALS Duo

Door signs, signposts or emergency exit easy to mount!

SignSetter DLS Duo Flexi

Works great for the famous door-sign mounter.

MultiColorCaps System

The perfect system for creating a nice finished look with colored caps. 15 colors plus gold and chrom. Including screws!

SignLevel ALS

This is the „non-electric“ version to level your signs, displays, neons and many more. The good readable spirit level shows you exactly, where to lift or lower the sign. It's always good to have an extra pair of hands,

SignLevel DLS Flexi

Our best alignment tool for sign installation! There are many who are already using the apps for smartphones and have downloaded this ample free spirit levels. It was a no-brainer to construct a suction cup holder that your smartphone sits in securely for use as a level.

Hole 'N'Cut

No more unnerving double measurements of boreholes. The ultimate template with the 2-in1 feature. With Sign-Rim Cutter

Hole 'N'Cut Eco

One of our most popular products „Hole n' Cut“ gets its wish with a „transparent sister“ made of cast acrylic glass.

Hole 'n' Cut XXL Eco

The super template with the 2-in-1 function
NOW EVEN BIGGER!

NEW

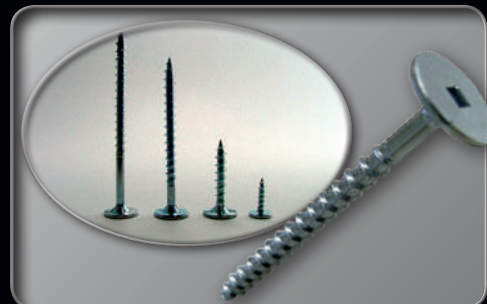

DES - PRODUCT
Designed by a signmaker!

More information on page 4

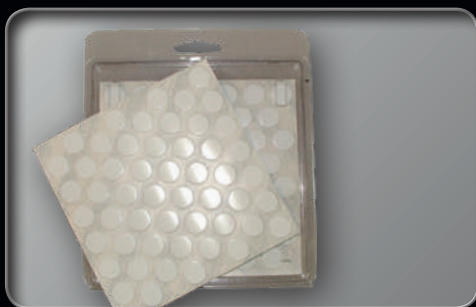

The all-new Hole 'n' Cut XXL Eco provides up to the double amount of marking bore-holes and framecuts (from zero to 80mm). No toolbox should miss this genius :)

MagicDrill Set
Perfect to lower screws flush with the shield.

SuperSign Screws
The perfect way of "invisible" screwing.
Four different sizes available.

SuperSign Caps
This Caps are self-adhesive made of hard plastic and fit exactly on SignScrews.

SuperSign Set
Everything you need in a strong, secure clear case (so you always see what you've got!) that makes protecting your professional image easier than ever before.

BannerBone Classic

The self-adhesive "no grommet" solution.

The solid plastic loop allows you to put a rope through it to hang it. But, cutting the loop off won't hurt the rigidity. Ok - be fair to yourself and count the time: Flipping over the banner edge, welding or glueing, holding, waiting, punching and pressing takes forever. BannerBone just needs five seconds each turn.

Ten pieces in a pack.

PowerTape Banner Back

Together with one of the leading tape manufacturers of Europe, we've worked out a pretty fine selection of selfadhesive tapes for your daily tasks. The performance of those high-end tapes is almost unbelievable.

BannerFix HD

Using our BannerFix the advertisements of your customer can be read by people just driving along...! Also ideal for offices on the second floor. Length: 60 cm

YelloGrommets

Even cutting eyelets for EasyPress in chrome and brass: 9,5mm or 11mm

BannerWing Clear

...for Banners, Prints, Posters and many more :) Just ask for free samples.

BannerBoost Tape

Professional reinforcement tape to reinforce grommets on banners.

EasyPress

The go-anywhere, handheld grommetting-tool for adding a quick grommet.

BannerPuncher

These handy BannerPuncher punches a 8 mm hole in your Banner in seconds. Safely, quickly and accurately.

SignPad HD

The suction cups allow a safe mounting of even bigger composite-plate signs.

BannerRope

Strong nylon cord Ø 6mm for safe and easy hanging of your banners.

EasyScore

Cut out half-circles to prevent your banner from collapsing due to wind gusts,
